Sarwagya Singh
Recruiting Team
Vestcodes

Dear Sarwagya Singh,

I am writing to apply for the React Native App Development Intern (TypeScript) position at Vestcodes. As a final-year Computer Science student at IIIT Sonapat with hands-on experience building and deploying React Native applications in production, I was excited to see a role that lines up so closely with the work I have already been doing as an intern.

During my internship at GigzGenie, I architected a React Native mobile app spanning 10+ screens and 25+ REST APIs, deployed end-to-end on the Google Play Store. I built Google Maps geofencing with a dynamic 50–500m radius and client-side validation to support real-time gig worker tracking, and developed a role-based admin portal that removed the need for manual engineering involvement in 12+ daily operations, cutting resolution time by roughly 50%. At Xelron, I resolved 35+ bugs and shipped 15+ features across an agile codebase through 30+ pull requests, working entirely through CLI-based workflows. Together, these roles gave me direct experience with the exact stack this internship calls for: React Native, TypeScript, REST API integration, state management with Context API and Redux, and Git/GitHub-based collaboration.

Beyond internship work, I have built several React Native and full-stack projects independently, including Whispr, an AI audiobook app that converts text, PDF, and DOCX files into narrated audio with JWT and Google authentication across 12+ API routes, and LinkSaver, an AI-powered bookmarking platform used by 500+ people. I enjoy translating designs into clean, responsive interfaces and am comfortable debugging across devices and working closely with backend and design teams to ship complete features, not just isolated screens.

What draws me to Vestcodes specifically is the chance to work as part of a small, hands-on product studio where an intern can contribute to real client and in-house apps rather than isolated practice tasks. I would welcome the opportunity to bring my React Native and TypeScript experience to your engineering team and to keep learning from experienced developers along the way.

Thank you for considering my application. I have attached my resume for further detail and would be glad to discuss how I can contribute to Vestcodes' projects.

Sincerely,

Kshitij Gupta
